Product Description

STIHL BRA 280 Battery Powered Backpack Blower

The STIHL BRA 280 is where power meets precision. It delivers 25 percent more blowing force than the BRA 200 yet still weighs less than a case of water—just 24 pounds with two AP 300 S batteries. Designed for professionals who demand more, it features a full handle-mounted HMI display that gives you real-time battery status, speed control, service alerts, and access to energy-saving modes. Through the STIHL App and Connected Portal, you can track performance, plan maintenance, and optimize your workflow like never before. The BRA 280 also features STIHL's constant power technology, which means you get full, unrelenting performance from the first trigger pull to the last second of battery life. And with its low-noise operation, it's perfect for early morning starts in residential neighborhoods, school campuses, or hospital grounds. Imagine clearing a city sidewalk at dawn without waking a soul or finishing a job before lunch without ever stopping to change batteries. The BRA 280 is more than a blower—it's a connected, intelligent tool built to keep pace with the demands of modern landscaping and municipal work.
